Sprint 2 Burndown Chart

The burndown chart reflects the progress of Sprint 2. The planned burndown line represents the ideal rate of completing **34 story points across 14 days**. Actual progress began slowly but improved in the second half of the sprint as key blockers were resolved.

Velocity Comparison:
- Previous Sprint Velocity: 18 SP
- Planned Velocity (Sprint 2): 34 SP
- Actual Velocity: 34 SP

Explanation:
Velocity increased due to improved familiarity with the project, clearer task definitions, and fewer context-switching interruptions. The team was able to maintain a steady work pace and complete all committed story points.
